TOP SECRET 'U'

INTERROGATION OF GERMAN CRYPTOGRAPHERS OF THE 'PERS ZS' DEPARTMENT OF THE AUSWARTIGES AMT

This publication is a report on the interrogation of twenty-one cryptographers of 'Pers ZS' carried out in UK at seven meetings during May 1945. 'Pers ZS' worked only on diplomatic systems.

Interrelation of German Organizations hars of the 'Pers I' Department of the Austria es Amt

Seven meetings were held at which 17 male and 4 f male crypt graphers were interviewed. The attached sinutes provide a recent of the proceedings.

The interrolators were concerned to concol their own knowledge of the details of the subject and of any specific German of freign system. The Germans were co-operative and ready to answer questions and volunteer statements.

With the cryptographic details of German Diplomatic Cyphers but we will not question him on this subject nor did he speak about it himself.

Interregation was allowed to develop naturally from such coneral questions as "That was the nature of your work?" Or questions were put on the captured material we now hold. For example we raised the question of Swedish usage by reterring to the Swedish-made Hagelin Machine found among the 'Pers ZS' papers.

The general impression of the party as a Cryptographic Unit was that it was competent but limited. It was seriously handicapped by lack of staff. Hollerith machinery was not introduced until 1942 and then only in small quantities and rather by chance than considered policy. Little or no encouragement came from those and neither directives nor pressure to complete tasks were forthcoming. Liaison with other German Cryptographic Units was very bad and with Allies of Germany non-existent. They were frightened by Machine Cyphers as a practical problem although some theoretical work had been undertaken on the security of such cyphers. They seemed to have relished their low-grade successes unduly and to have been too ready to reject as impossible - 2n³ then to forcet - the high-grade systems beyond their powers. The senior officers were convinced of the security of German high-grade system. Virtually no intelligence work was done on the contents of troken response.

The work of 'Pers 2S' was confined to lipl matic system and did not include Service Attaché Cyphers. The OKT and Object of Forschungsamt also worked in Diplomatic systems and the region of all three stations were marked by jealousy rather than y co-operation.

More can be learned of the German ettack on british in bottle systems from Frl. Haven who is now ill under supervision at Mariurs, and we recommend that she be interrepated.

One ther member of the party still remains to be interrested. This is in. Helmut Grunsky, a methematician. We is story cont in he spital.

Photographs on finger-prints of 11 thus intermed 1 refiled in C.C.R. Section G.C.20.3.

Letin Christen for ...(4)

9th May, 1945 at the Oratory School. First Moeting at 11.30.

Present: Driewlier Tiltran (in the chair . Professor Vincent O 1. G. k U.S.... t. Ephl U.S..., Er. Forst rand later: Professor Dr. Tahrlack.

- It was acrowd before the months;
 to treat general matters only
 to interview Fr feso r is maked as no first.
- 2. Professor Rehrhadi was then called and caked to exist the remissation to which he had need. It was made clear to aim that the meeting had neither the fesire nor to a wor't intidic to be a his called uses into importing information a minst their will. He realied that he and his colleagues were reserved to alk nor fusion all basis of 'exchange of results' though it as all to them that the exchange would necessarily be nested.
- 3. He gave the official lesignation of his reanisation is Department form Z S' of the Auswartines Amt. It has form rly leen knewn as the 'Chiffrieralteilune' but later the over 'lere' at was adopted. The organisation was concerned with ory form my or foreign diplomatic oclus and cychers; no military or their retorical was handled.
- 4. There was another department of the Auswirtigs and which dealt with the production and security of German diplomatic system, but any liaison between it and 'Pers Z S' was purely informal. This department had remained in D erlin until the end.
- 5. The head of the organisation was Gesandter SELCHT. The three sections of which it consisted were under

Oberregierungsrat SCHOUFFLE.

" Dr. F. SCHKE

" Dr. KUME

- 6. <u>Dr. Kunze</u> was an ali hand and teen in the regnie ti n are 27 years. He was responsible for the intial brooking for intent systems, recyclerments etc. His staff consisted largely of mathematicians. Hellerith machines had not been evailable to the until 1942 but by the end he had at ut 20 m chin s. This are thought to be due to the personal interest of aill norm.

- i. There was very little linion with their or to me also were a thing wie in which relici so with the sign one to mealure.

- 10. Profess rechrbach was at pains to explain his was assition. He had a chair of mathematics at Traque, which he held concurrently with his appointment with the Foreign Office, travelling often lack and forth. He had chanced to be at Turgscheidungen when the clace was verrun. The senior members of the organisation had panicked in the associated selebow, and he was the only person who had had the presence of mind to take any common sense action. He had thus become the leader of the party. He was coreful to point out that this was not due to any position he held within the organisation or to any superior competence he might have as a cryptographer, but purely to force of character. In discussion of question of cryptographic letail he wished to be regarded merely as a member of Dr. Kunze's section.
- 11. The pentlemen appeared to be as comfortable as was consistent with the circumstances, but were concerned about no of their number, Dr. GRUNSKY, the was suspected of having acute tuberculosis. This had been disc vered the day been they left Germany. It was arranged that he shoul' have a medical examination. [Comment: he has since been admitted to hespital and was therefore not available for interrection. He is a member of Dr. Kunze's section.]

SECOND MEETING (At 3 o'clock on 9th May 1945 at the Oratory School)

Present: The foregoing and Dr. Kunze, Dr. Paschke and ORR Schauffler

- 12. The basis on which the meetings were to be conducted was explained to the new arrivals. The principle of 'one-sided exchange' ('einseitiger Austausch') was rareed to. [Comment: The interrogators felt much obliged to Lt.Côl. Evans who appears to have been originally responsible for this highly diplomatic formula.]
- 13. Fr. Kunze was asked to sketch what in his opinion the principal successes of the organisation had been.
- 14. He stated that he himself had been employed on similar work by the High Command in the last war and mentioned success with British naval cypher at that time.
- 15. In 1924 he had broken a French system of bigram substitution using 100-figure bigram tables on a 4 figure book.
- 16. Russian systems had been read at that time but, as Dr. Paschke observed, after the appearance of the British White Paper in 1927 the Russians changed their systems and discouraged circular telegrams; there was their not enough depth.
- 17. Thish ystems consisting of subtractor tables on a 4 figure back were mentioned as having been solved at about that time.
- 18. In 192 or 1930 they be on to read <u>Jugoslav</u> traffic omploying bigrammatic substitution on a 5 firue book. It first the recynherment was applied horizontally, later vertically. <u>Manchurian</u> systems were mentioned, but conversation transhed off to the subject of Japanese. At this point <u>ORR</u>, Schauffler also took part in the conversation.
- 19. Japanese: Until 1934 1 for grade Ja anese systems were read currently. After 1934 the Japanese went over increasingly to the use of a machine. The moral effect of the machine on the party had been considerable and it was some time lefter they discovered that it could the retically be to ken. They did not in fact read any traffic until September 1938. They then read the machine currently until February 1939 then it became unreadable owing to difficulties with the wheel turn-over [Comment: The use of a different machine loss not seem to have been considered]. In the meantime they read all the lock traffic currently until the end.

- 20. Chinese: ORA. Schauffler had worked in Chinese systems for 20 years, part of the time in conjunction with the colebrated linguist Legationsrat Krebs, whose pupil he considered himself to be. They read 4 figure and 4 letter traffic until 1930. At the beginning of the war Chinese was taken up again in conjunction with the O.K.W., which supplied personnel. It was agreed to discuss Far Eastern traffic in detail at some later meeting.
- 21. They handled no attaché traffic, either Japanese or any other, Dr. Steinberg of the O.K.W. was said to have worked on Japanese military attaché traffic.
- 22. Dritish: In 1939 Kunze was approached by the Luftwaffe for assistance with British weather cyphers. He was successful with these.
- 23. In May 1938 they began to break a British diplomatic system. In 1940 to 41 the tables ran for three months, so that there was considerable depth [Comment: Uncertain whether these two sentences refer to the same system]. They found however that the labour involved was such that it was too much trouble to read the material currently without machines. On the introduction of 'special' keys the investigation was discontinued. A written report was available on this subject [Comment: The circumstance that this investigation was broken off in 1941 and that Hollerith machinery became available in 1942 may be connected, though this point was not raised at the time. They appear at all events to have had no further success with British systems. It was thought best not to press this point for the time being but to discuss it in detail at a later meeting].
- 24. In 1943 the American strip system N_O, 2 was solved, but with considerable time $\overline{\text{lag}}$. It involved a great deal of time and effort. A machine was designed to eliminate this, and D_r. Kunze thought that it must be with the machinery sent from Hermsdorf in three waggons, only one of which had arrived at Zschepplin. He thought that most of the workings on this system had been destroyed at Zschepplin.
- 25. Italian: Dr. Paschke was asked what success he had had with Italian systems. He replied that he had been instructed in 1935 to devote special attention to Italian and that the results had been the best imaginable; they had read everything ('Den schönsten Erfolg, den man sich denkan kann; es wurde alles gelesen'). In 1942-43 work became increasingly difficult: the Italians increased their subtractor material before the collapse and employed bigram substitution over a subtractor over a book. If they had changed the book, the traffic would have become 'impossible' to read. After the collapse they read a Government code 'Impero' recyclered with figures from the encode, with little depth. Later the Government systems were not read for lack of depth, but it was thought that they used double transposition. The Me fascists had used a 5,000 figure subtractor; the peculiar systematic arrangement of the figures in the subtractor assisted solution very much. In the last three months the Neofascists had used unrecyclered had subtract casily read, and an alphabetical book with a short subtractor called at 1.
- 26. Captured material: When asked what assistance they had had from captured material he said that it was unwelcome and seld museful. They had never had any liais n with foreign (e.g. Finnish, Hungarian or Japanese) cryptographic organisations and had never been visited by foreign cryptographers.

27. Note: All four gentlemen seemed to be fully a operative, includ-Dr. raschke, contrary to reports from the field. They were concerned about their security, as they had no privacy and would in the long run find it difficult to keep the nature of their work secret from their fellow internees. It was suggested that they might be prepared to write reports on their activity, to which all replied that they would be prepared to do so but their present circumstances were unsuited to 'scientific work'.

The meeting was adjourned.

THIRD MEETING

Held at 101 Nightingale Lane, Wandsworth on 10.5.45 at 12.15

Present: Professor Vincent (in the chair), Col. Cook U.S...,
Lt. Fehl U.S.A., Dr. Forster, Frl. Friedrichs
and later: Frl. Dr. Pannwitz, Frau Dr. Hühnke, Frl. Schnader.

- 28. It was decided before the meeting
 a, to discuss general matters only
 b. to see Frl. Friedrichs alone first.
- 29. The basis on which the meetings were to be conducted was explained to Frl. Friedrichs, who agreed. The conversation was conducted in English.
- 29. Frl. Friedrichs stated that her duty was decypherment of Bulgarian and other Slavonic cyphers. She had, however, from time to time been loaned to other sections. For instance she had been loaned for a time to Dr. Kunze at the time when the American strip system Number 2 was being broken. She had maintained a personal interest in the American strip system and had clearly enjoyed the work very much. She mentioned Herr Zastrow as an authority on U.S. systems.
- 31. Her approach to the work as a whole was a professional one, the work gave her pleasure and she felt a proprietary interest in it.
- 32. She touched on the position of women in the organisation. She said it had been a long fight to obtain for women the same pay as men, but that that had finally been achieved, but, though they received the same pay they had not the same status. At the beginning of the war a great many women had been engaged somewhat to the chagrin of men who had not been used to working with large numbers of women. She instanced the case of one woman who had reached a senior position in the organisation, Frl. Hagen, for whom she evidently had a great admiration, and whom she characterised as an extremely able cryptogra, her. Her duty was primarily British cypher systems and the systems of the Spanish and Portuguese countries. At the time of their departure from Germany Frl. Hagen was in hospital with a skin complaint.
- 33. When asked whether she knew of any connection that the organisation had with similar organisations outside, she answered in the negative. Such limison as was done was carried out by Dr. Paschke. She gave the impression that, far from these having been any coordination between the various cryptographic organisations, there was a considerable feeling of rivalry.
- 34. The general impression that she have of her organisation was that it was a small, self-contained show, functioning entirely by itself, that it was starved of personnel and equipment and that little interest was taken in it higher up. *

^{*} Total personnel she thought was about 120, of whan 10 were employed in the Elevanic section.

- 35. The Head of the regularities was perspected whimistrator who understood little about crystography, on was content to leave the specialists to run their affairs as it seems list to them.
- 36. Then asked whether there and over been and visione of a reciation of the work done in the arganisation, she realise that one had been none. From time to time, copies of the telegrams they issued had been returned to them bearing a storp indicating that they have been by the Führer, etherwise no indication of the importance at tells to this work had penetrated to the level at which she worked.
- 37. No intelligence was extracted from the anternal by them, except such as was necessary in order to enable them to continue reading the traffic. There was no sense of urgency in the office, Recymered messages were not transmitted by teleprinter to their recijient.
- 38. In the matter of translation of decyphored texts, the organisation had established rigid rules and in general favoured a literal translation in contradistinction to the practice of the OKT, which was always concerned to round off and polish up the translation and make it flow, usually leaving out corrupt groups or abscure passages.
- 39. There was little encouragement given to communication of results inside the organisation by junior members, who were encouraged to mind their own business. In general such exchange of results as was derived out was done on a purely informal basis as between friends.
- 40. Frl. Friedrichs was concerned about the possible fate of the non. The herself had been about the world a fair amount and would find it crysto obtain different employment after the war. Most of the non were already in late middle age; they had done nothing but crystogra by all their lives and had no other interests and she did not see how they were going to support themselves without it. [Comment: No statement was made by the interrogators in response to this hint regarding the eventual disposal of the members of this organisation.]
- 41. It was felt that little more of a general nature could be licited, so that it was feeled to call in the remaining ladies, From Dr. Winnke, Frl. Dr. Pannwitz and Frl. Schrader. A short discussion of personal matters was nell with them. They were concerned about the fate of their men-folk and wished information to be given to their relations in formal that they were safe and sound if this were possible. It was sere prepared to transmit such requests; they could, however, give no the worse for their two days' sejourn in Holloway arison.

Intermediate I sting; held it 101 Michtingale Lane, Januar orth on

Present: Ir. Forster; Prl. Friedrichs, Fru Dr. Minke, Prl. Dr. Friedrichs

whereabouts of Prl. hagen, the specialist on British in Bouts corien under British or U.S. control. The estensible object was to bring Prl. Priodrichs' lungge, which has been belivered at the firstery School in error.

41b. Before the meeting took place, the interrogator was met, on arrival in the German detainees' wing by a young German woman who did not belong to the party he intended to see and was apparently a new arrival. She said: 'Wer sind Sie?' and got the reply that the interrogator was looking for Frl. Friedrichs. She then said: 'Sind Sie vom Auswärtigen Amt?'. The interrogator denied any connexion with the Foreign Office.

41c. Fri. Friedrichs and her party being assembled in a separate room, Frau Dr. Hunke said that Fri. Hagen was last heard of in the German military hospital at Zschepplin. This hospital was housed in the Schloss, the same building as was occupied by the 'Pers.ZS' personnel. She suffered from 'Gesichtsrose' (erysipelas) and when they had last seen her was too ill to be moved. She was presumably still there and would, they thought, be glad to be evacuated out of the way of the Russians. [Comment: this reason for evacuating Fri. Hagen was not suggested by the interrogator.]

41d. When asked to describe her they all agreed that she was tall, fair-haired and anaemic-looking, walked with a characteristic stoop and had a high squeaky voice. Age about 38.

41e. Frau Dr. HUhnke was very worried at the probable fate of her mother and infant son Horst in a Russian occupied area. The interregator did his best to calm her.

41f. The meeting was adjourned, its object achieved. The information was telephoned from Nightingale Lane to A.D.(C.C.R.) and TICOM representatives. [Comment: Frl. Hagen has since been evacuated from Zschepplin to Marburg where she is in hospital under supervision.]

Fourth Meeting; held at the Oratory School on 19th May, 1945 at 11 a.m.

Present: Prof. Vincent (in the chair), Major Seaman U.S..., Lt. Fehl, U.S.A., Dr. Forster.
and later: Dr. Kunze, Frofessor Rohrbach, Herren Rave, Hierer and Grosse.

42. Dr. Kunze and Professor Rohrbach were called.

43. When examining the captured material it was found that the most recent work reports were missing. The gentlemen were asked what the explanation of this was. They replied that all the documents of the research section had been destroyed at Zschepplin.

44. Dr. Kunze was then asked about the machine, mentioned at a previous meeting (see para. 24), for solving the American strip. This machine was for decoding, not for analysing. Double-length strips were hung on lugs attached to rollers. The cypher text was typed on a machine which unrolled the strips so that the cypher text was visible along the bottom of the window. The clear text was then visible on some line higher up in the window. An electric levice had been designed to illuminate the frequent clear text letters. This was abandoned, as it was found more convenient to print the common letters in heavy type on the strips and read off the lines containing the restest number of letters in heavy type. The strips were and 52 letters langer were arranged in a bank of 15. The machine was thought to be with some Hollerith machinery in two wargons which had never arrived at Zschepplin. [Comment: see para. 24.]

- 45. The respect to the Happin Mechine found among the captured atternal, Dr. Hunze sail it was thought that Remania, Sweler and Pinland used this mechine. Me traffic had ever meen solved for lact of time and personnel. He had heard it said that the Happin was also used by and personnel. He had heard it said that the Happin was also used by the Prench and Aderican armies. The specimen mention of his been acquired by the regardantion for general investigation of its proporties and had never been used to decode anything. [Corment: the number on the cyclemeter of the chine is only 295.]
- 46. Dr. kunde was then asked about the Japanese machine traffic discussed at a reviews meeting (see para. 19) and whether a machine had been constructed to decode it. He replied no, that they had been able to achieve the desired result with paper models.
- 47. Hajer from then asked about the purpose of a number of ritary switches foun mong the captured material. Dr. Funze said that he was not quite sure what switches were meant but he thought that they were captured material ('Beutematerial') sent to them 'in case they came in useful', as electrical fittings of this kind were in short supply.
- 48. Scandinavian systems were next discussed. No material had been real. Swelish traffic, thought a priori to be Hagelin, was investigated for three months in 1941. It first the machine had 25 letters, then after two months a machine with 26 letters was introduced. In the unst 1944 another investigation was begun, in which Professor Tohrbach participated, to determine whether the indicators fitted the Hagelin pattern.
- 49. Asked about Turkish systems, on which there was a noticeable lack of material among the contured documents, Dr. Kunze stated that all the Turkish material had been burnt.
- 50. Dr. Munze was then dismissed and Messrs. Rave, Hierer and Grosse were called. Professor Rahrbach in the meantime explained that these gentlemen were of a definitely lower grade and had come to 'Pers 'S' to be trained. He spoke of them with obvious distaste.
- 51. Messrs. Rave, Hierer and Grosse were all employed by the O.K.W. and leaned to 'Pers ZS' in December 1943 to assist with Chinese Engineer traffic.
- 52. Rave has joined the O.K.T. in October 1971. He was fire at Tirpitzufor 72 76 until it was bombed out, then at Ir Dol, Iralian. He had get his friend Hierer into the O.K.T. because of his kmolecule of Chinese. Ground had been employed on Italian at the O.T.T. and was later transferred to Chinese. It is not appear that we had any knowledge of the atter language.
- 53. Rove, the spokesmor of the group, one a solder of the runnightion of O.K. 1. Ohi. The heal as oberst Karf, who relieved in 1963 by Oberst Karling. The section were stranslating and a sold recking, unfor Ministerial Founce; Interception; Intelligence, unformatted Rolling organization of stranslation of 121, the partment localing with plainistration of spreamed.
- 54. Rove and the others had worked in Penner's section under Of resultant Later. This group consisted of 12 15 people, on page of first in Japanese only, then Chinese.

- 55. Then asked that into that heard of no the successes of 0.1. Ohi, they said that they had board variably of successes in marious and British systems and mentione described military attacks recombined code read in 1942 when Remod was in North fries. The thought it had been broken by cryptagraphy, no wing to mysical comprehise. [Jordent: it was plain that these statements were based in runnur only.]
- 56. They admitted that most of the tark don in 'Para 18' was 'uplicated in the C.K.M., which worked on diplomatic systems only. Service systems were dealt with by the respective services concerned, C.K.M., O.K.M. etc. Maison between C.K.M. and 'Para 11' was carried in by Penner and Marchke [Corment: Lunze and Para 18' was carried in by cryptographers in World War I.], who were concerned at the amount of duplication and worked at avoid it. Their efforts were not regarded with favour by Belchov. There had been some co-operation, early in 1943 on Purkish, but apart from that the loan of Rave, Hierar and Grosse to 'Pers. ZS' had been the only occasion they knew of an which the two departments had worked together. The situation was not improved by O.K.M.'s practice of calling up competent people from other "epartments, putting them in the ranks are then drafting them into its own cryptographic organization.
- 57. The O.K.W. had neither the long tradition nor the expertise which 'Pers.ZS' possessed, though Ministerialrat Fenner and a small party had been engaged on this work in peace-time. [Comment: it is possible that this was said in deference to Professor Rohrbach who was present throughout this interview.]
- 58. In the matter of capturel material and machines, Rave said that new arrivals at O.K.W. Od had been shown a British machine captured at Dunkirk. It was broken and rusty and did not work.
- 59. Chinese and Japanese systems: They had read a Chinese Military Litache system, which had cented in april or May 19.5. The first groups of the traffic were EFR, SKW or J.W. The recyphorment consists of transposition within the code groups. The groups were 3 letter groups. They solved the recyphorment but never read any messages.
- 60. Another Chinese traffic, with descriminant MDEN, was invertible. It also consisted of 3 letter groups but was unrecyclical. It contains many spells which were easily recognisable, the name atc. being a letter in simple substitution. It was a purely military abs.
- 61. They broke a Japanese 'Konnwort Cold' consisting of suble transposition of 2 and 4 letter groups from a large ask; the transposition was done by a stencil, the stencil leins to a sub-first a transposing operations. The system was broken a resonant and I two a diplomatic system use a containing one factor. They retail the first the likile of 1942 to June and III.
- 62. No work was done on J. mass art out jobble. I've remainered the Japanese Weyel lettent visiting where the Lat.
- 63. Grosse, take about Italian work in the form, outlook a diplomatic system of 22 km. The Injero construction of the Possess of provious moetics on Italian work in Fors. 22 (con par. 25) The Italian section in the O.M.T. consisted in 15 of 10 to 10.
- 64. Professor Reinstant clare lout, from these the annual own cismissed, that their statement on the Japane 'pomment Cos' makes inaccurate. The recipier and the single transmitter, not a ploa-

Pift, Mosting; Will at the Ora ry School on 19th Mry 1745 at 3 1.1.

Tresent: Tref. Viscent (in the chair), Major Beaumn U.S..., Lt. Fehl, U.S..., Dr. Ferster.

and later: In succession: Dr. Austien, RR. Zastev, Tref. Rehrbach

- 65. Dr. Kristien and Professor Rohrbach were called to other. Dr. Kristien however objected to the presence of Rahrbach and it was acreed to interview him alone. [Comment: Rehrbach informed the necting later that there was consider ble antagonism between himself and Irration.]
- 66. Dr. Morstien had been employed on Slavonic systems until 1930 when he changed to Chinese. In 1938 after the Ansehluss the Slavonic countries become more important and he went back to them.
- 67. The Yugoslavs used a five figure code with letter bigrow tables consisting of 100 bigrams. This system was read from 1938 to 1943, when traffic dropped, after which it was read with interruptions. They have not received any Tito traffic, nor military attaché.
- 68. Arising out of the matter of attaché systems he gave a short summary of the division of work between the O.K.W. and 'Pers.ZS'. The O.K.W. had at first been responsible for service systems only but had not had enough reads be material to train its personnel. It had then taken up diplomatic systems and having once tasted blood it refused to leave them. 'Pers.ZS' left all attaché systems to O.K.W. [Comment: Dr. Harstien was electly at some pains to bring out the interdepartmental rivalry at which other members of the organization had only hinted.]
- 69. He mentioned a 10,000 group Chinese Code worked on by Dr.Olbricht, who he thought was lucky, as in the days when he himself worked in the Chinese he had to cope with a code book of 40,000 groups.
- 70. Asked about the application of the experience of the organization to the security of German systems, he said that at an early stage the formans had progressed so far on a scientific basis that they had little to learn (... 'sind schon früh auf wissenschaftlichen Gebiet sehr weit jekommen, sodass wohl kein Belehrung nötig gewesen'). He mentioned 0.R.R. Langlotz (who died two years ago) and 0.R.R. Schauffler as having materially contributed to this desirable result. [Corment: see para. 117.]
- 71. He discounted any assistance received from emptured material. He had had occasion to examine captured Czech material unlistate that the Czech systems were unbreakable. In reply so the quantion (in the respect were they unbreakable? he stated that the Czechs used one-time and a difference between systems under were insoluble in arcatice (owing to lick of time, erronnel or owing ent) and those insoluble in principle, such as the Czech, Russian and Carran systems. [Comment: This valuable listinction was then proceed by the interrogators.]
- 72. Polish systems he had foun unbreakable in practice; there are too many of them. They require more labour than the epartment had its disjosal. He mentioned a five figure book with a subtractor.
- 73. The Dulgar and used five figure 2000 f 40,000 graps with trequent repagns tion.

74. The Lithuanians of Lett; used running transposition, operations double, sometimes single, occasionally represent with Vignore substitution.

75. He has never been concerned with the solution of machine systems.

76. No liaison with foreign cryptographers existed.

77. No intelligence work was done in the department itself on decyphered attrict, though the selection of material for issue was of course guided by considerations of its possible intelligence value. This selection was done by the Referent [sub-section head] on the basis of knowledge and experience.

78. In the matter of efficial recognition of work done by the organization he observed that there was none, even from the Minister though, as everywhere, the authorities were quick enough when it came to complaining. [Comment: this question was inspired by the discovery in Dr. Paschke's private papers of a letter dated 30.5.1938 from the Foreign Minister, von Weizsücker, congratulating Paschke on particularly successful efforts ('besonders erfolgreiche Bemühungen') in the field of work assigned to him.] 'We worked', said Dr. Karstien with same complacency, 'entirely in the dark' ['Wir arbeiteten vollstänlig im Dunkeln'. Comment: the romantic aspect of this kind of activity a peared to afford him some satisfaction.] It had been different with the Austrian Foreign Office cryptographers, who has been faild partly by results; solution of a difficult problem had been rewarded by a bonus. A former member of the Austrian organization (now dard) had transferred to 'Pers. 23' after the Anschluss and professed himself dissatisfied with the romuncration in his new employment.

79. Dr. Karstien was dismissed and Herr Mastrow called.

80. Herr Zastrow asked that Professor Rohrbach be allowed to be present at the interview. He was accordingly called.

81. Herr Zastrow is a bookbreaker and has been engaged in U.S. systems for 27 years. The americans used mainly 5 letter books with 10 recyphoring tables for monoalphabetic and bigrom substitution to each book. The tables ran for two to six months. Later ther substitution tables began to be used, with 5 indicator traps to can table. The tables were changed in the course of a message, the indicator for the new table being encyphore? with the previous table.

82. The german lesignation for these systems was al, 2, 13 de., to Blo, (5 = Ruchstabe). Macrison equivalents he removed were:

36a = A1 36b = B137 = C1

The Bon book was in an abrown paysic lest promise. The loom Cool had been captured but it has been broken buf re capture. The recon-

struction of the book in taken 2 years.

83. I transposition system used by the 'O relinator of Information Washington' was mentioned. We success had been reduced with this.

- of the Priview of Larie new lead to the O.K. The head of the Priview of the same work as was lens in 'Pers. 25' but he was to the it.
- For Eastrew know of n U.S. machines or cyners where her the strip.
- Mould like to chine over to some kind of administrative jost in the liplomatic service. [Comment: the interrojators did not think he would be well in such a post.]
- B7. Professor Rehrbach was careful to point out that the loan of Eastrow to the O.A.W. by 'Pers.ZS' was a very different latter from the loan of Rave, Hierer and Grosse to 'Pers.ZS' by the O.K.W. Eastrow was an expert and a man of considerable experience, whereas the other three were young men who had to be taught their lusiness. [See para. 50]
- 88. [Comment: Conversation was carried on in English. Herr Zastrow's a peech consisted largely of indistinct mumblings, so that some difficulty was experienced in recording what he said. Prof. Rohrbach informed the interrogators that Jastrow was very difficult to unlar tandeven when speaking German.]
- 9. The meeting was adjourned.

Sixth Meeting; held in the Oratory School on May 21st, 1945, ll a.m. to

resent: Professor Vincent (in the chair), Commander (S) Dulle Smith, R.N., Major Seanon U.S.A., L. Fehl, U.S.A., Dr. Forster, P.O.M. Phipps W.R.N.S.
Dr. Laschke, ORR Sensuffler, From Rohrlach.

- 10. The main object of this meeting was to obtain internation of work done on British systems.
- Di. In reply to the question whether work was one on Colonial wife, posinions of India Office systems, Ir. Caschke relies that it a Cifficult to keep them apart. All unrecyphered occessore investigate. India Office traffic was only investigate when enough are not accessionable, which was not often, are in any case only as a listle enterial.
- 92. British wreewhere 14-letter books. The the continued the introduction of them book in the remaining of cosmological with the introduction of the information of course depends in the interest. They have subsection for remaining or refer the wrose further than the press. They have subsection for remaining the refer the wrote further than the pressure in the pressure of the interest of the pressure with the continued of the state of the pressure with the pr

- 93. British unreapphenel 5-letter looks. The time latter in book-building was larger than with the 4-letter looks, i.e. 4 to 5 wanths, but the centent of the resonger as less important. There were two large books, one in general use, the other principally use for the traffic traffic of the South Ario. Government. The first was also used by Bire. These books were if no great i portance in for not fully built up.
- 94. One 4-letter and the 5-letter bear were explured in Norway but both were already resulable.
- 95. No recyphered letter traffic was read.
- 96. British figure systems. They had no captured backs, but an out of late recyphering table was captured in Norway, which enabled Dr. Kunse to strip the traffic for a time. Analysis of the captured table gave an idea of the scope and method of recyphering, but they never actually read any of the traffic. The starting points for the subtractor depended on the date and the number of the ressage.
- 97. No work was done on figure traffic sent with a 5-letter inlicator of the type CVCVC or VCVCV. It contained groups on unrecy here code in the preamble. No intelligence about order of buttle of imilitary authorities etc. was extracted from these preambles in the auswartiges but, as the O.K.W. had codies of the means as in any case. He assistance in breaking additive recypherments was received from references to previous telegrams made in plain code in the preambles of cypher telegrams.
- 98. I "five" figure system, Interdepartmental Cypher, was captured in Norway, but the O.K.V. and Göringe Furschun soft mere principally concerned with its exploitation. He than at that the degarbling system had been reconstructed.
- 99. Dr. Paschke made it clear that although these systems were nothered, there was in fact enough material for the toler and assistance was affered the argumization in this respect he said that they had to manage with the personnel that had. The acquisition of Hollerith machinery has no connexion with the previous failure to solve Tritish systems. For it ical checks were made to see whether the systems change but they are convinced that no fundamental change occurred.
- 100. No work was done on British commercial or Bank of England systems. Dr. Paschke was of the opinion that these were not hard by the O.K.W. either and suggested that Gürin 's Forschunger in have been concerned, as it has economic on an ustrial interests.
- lol. Authorities responsible for engite relie work in it. The material: It was made clear at this point that there are three independent parties working on diplomatic systems in Garany the O.K.W., the Auswirtiges last, an Güring's Passeum sout. The Auswirtiges last had loss light with the Par country.
- lo2. Shift Torkin: Workin; hours were from the two pers, though Dr. Munze's party occasionally worked nights. There as always a buty officer available at night. They not a work this system because it was difficult to be people who were our item to have a of webshes.

103. Interception: Paterial came from 3 min s urcus:

- 1. (...W., which maintained interception stations of Laf, Treuenbrictzen and Lörrach. Traffic received by 1/.
- 2. Forschungsom, sentions not an wn. Interial intercorded by the Post Office, both W/T and L/T, reached Persons' through the Forschungsont until the was tember out, after which this type of armerial on a direct from the Central Post Office.
- 7. Pers.ZS' maint incd a small interception station of its own in Dahlem, called Landhaus. It was used to expert the more important traffics such as intera and Lisben.

 Lendon was always very poorly received.

104. The U.K.W. maintained interception stations in occuried countries; he knew of one in the Balkans, one in Greece and one in France. No material was received from diplomatic posts alread and none from forcism interception services, except some traffic intercepted by the Hungarians which was forwarded through the O.K.W. Nothing was ever received from the Italians or the Pinns. In most cases the traffic was a pied in the O.K.W. or the Forschungsamt before it reached 'Pers. 3'', at there was no indication of its origin.

105. It was stated that the O.K.W. did no work on British recyclered books.

106. If when a new system was broken it was discovered that trific coult mainly with matters outside the diplomatic fiell, it was handed over to 0.M.T. for exploitation.

107. Dr. Pascake was unable to say which British channels produced the greatest number of messages with intelligence value and sail that Frl. Hagen could answer this question precisely. [Compart: See para. 41a ff; this lady is ill and is at present detained at Marburg.]

108. On the matter of misuse of low grade systems for the unisc of passing high grade information, Dr. Pachke stated that them in enoral the intelligence value of the low rade traffics was at high they had carried a number of messages of consider de interest. His in ression had been at the time that these nessages were made in that by fir the express bonefit of the Germans. He recalled a rule of because before the out-break of the war to the effect the writ in n t romain neutral in the event of a conflict between Gerrany and He remembered a case about six months and for the remembered 11 . Burn to forme concerning the burning of a significant field ntic Charter. U.O. The Traffixe . "INTER" has to ...

The frient traffic for important or there't forces then writish traffic, arth-forces the relief to 2 nd, a to corion when where the lost interior, at the links to error, about his many listen on widey where the lost interior, at the links to error, and the link masses from what in German. Intelligence a terial was also used from Finlan. In the many the links are a second.

- 111. ORR. Behauffler was asked about his interest in cycher machines. He said he never used any himself, but collected raterial bearing on the subject.
- 112. As much as twenty years ago he was interested in the Enigma as a cryptographic device. He mentioned a crinting Enigma as existing in those days, which was superseded by the Enigma with lights. The Wehrmacht had taken up this latter model and improved it.
- 113. The commercial type Enigma used by the Swiss was semetimes solved by stereotyped beginnings and known settings. The Swiss used to include in their messages the machine setting for the next massage.
- 114. He had investigated the Kryha machine and hel reported that it was soluble.
- 115. He had also some knowledge of the 'Geheimschreiber', one of the principal features of which he described as consisting of wheels with adjustable wiring. It was not very satisfactory and Hüttenhain of the O.K.W. Forschungsabteilung [Comment: not to be confused with Güring's Forschungsamt]was continually finding cryptographic faults in it. The Luswärtiges Amt used the 'Geheimschreiber' but the O.K.W. was responsible for the security of the device.
- 116. When asked where the machines came from which 'Pers.ZS' investigated, he said that they were supplied in order that their security could be tested. Higelin machines had been investigated by the Wehrmacht and O.K.H. had read material encyphered with them.
- 117. His own special duty was to ensure that cryptographic possibilities were known and appreciated. He had worked with ORR. Langlotz (see para, 70), Head of the Cypher Security Section of the Auswirtiges ant, on this subject and was satisfied with the liaison existing with the authorities responsible for German systems.
- 118. At this point, Dr. Paschke observed that they 'had reason to be convinced of the superiority of German systems' ('Vir waren mit Recht überzeugt von der Überlegenheit der deutschen Verfahren'), with which ORR. Schauffler agreed [Comment: the general context of this remark suggested that 'German systems' was intended to include the machine systems used by the armedforces.]
- 119. In reply to the suggestion that the alvent it machines ment that the great age of cryptography hallower to an end, O.R. Schauffler said that the great age hall begun with the first work war and was likely to end with the second. It was however worth bearing in aims that at the end of the last war people were saying that the are of cryptography was over.
- 1992. He felt that the history of cryptography, in which he had a lifelong interest, had in this commexion a real function to perform, in that it attracted attention to methods of solution and general cryptographic possibilities. Machines for instance were only insoluble as long as they were well used. The Swiss Lai maken been real because it was bally used. The Wehracht had laid flown strict rules for the use of the Eniger to ensure that compressed in not occur through improper use. The same applied to other systems.

lad. Or. Insolds at this point spake of a Russian light tic and time of which is been used by the Russian army under conditions which is not permit the normal instructions for use to be observed in onic, was thus compromised. The O.M.M. had read it up to Stalingran. The list are used more than once. The traffic was not sentimes on eith of 5 and frequently on depths of more 5. The solution as tabled by the circumstance that the Russians always used alphabetical ake, as they relied for security on the recipherment. The diplomatic ake or all four figure, the army backs all five figure.

121. Special characteristics of Russian one time ands. Large differences between a jacent figures were comparate cly rare. He has seen speciments of Russian one time pads captured in the field. They had been typed on a typewriter with one carbon. Geries of figures (c. 345576 etc.) with a difference of 1 were common and other sychological popularities of the typist, such as a recognisable list ate for zero ('Angst vor den Null'). The indicators were uncythered with the first group of the finished telegram. The false sum of the jenultimate group was the discriminant.

122. Mentioning the circumstance that the Russian systems than jul after the publication of the British White Paper in 1927, ORR. Schouffler remarked that we did not publish the really interesting material at the time and he had never been able to understand why not.

125. Double transposition. When asked about their peneral success with systems of this kind, Dr. Paschke stated that it was substituted possible to read them currently, but that it depends on the number of keys. In peneral he thought, and ORR. Schauffler agreed, that they caused as much trouble to the legitimate users as they fill to the cryptographer; they were secure but laborious. American louble transposition systems were known to exist, but no work had been length on them.

124. Last Tr Papers: ORR. Schoufflor observed that his loxes among the or ture interial ('Serie 20') contained a collection of natural relation to the organization work done by the Germans on Dritish Havel cyphers during the last war.

125. Strength of the Organisation since its Incoming: Round Tigurus velo divon as follows:

1016 20 t 30 popula 100 50 popula 100 t 100 procla 100 t 200 conta

126. The new tors was adjourned. Teffer the djournment or flas recommended and the another anything could be found the foundation of the Standard of Luckish, tolish an Olympic countries, which been last about if in custo or inhibit. Military asserted to the the stand of months of the stand of months of the stand of months of the custo, who is not in hospital. The mosting was unable to make any line on without of those points.

Seventh Le ting; neld in the Oratory School un May 21st, 1965. 2.45 p.m.

Present: Professor Vincent (in the chair), Cdr (5) Dudley Smith, R.N., Major Scaman U.S.A., Lt. Fehl, U.S.A., Dr. Forster, P.O. M.

Phipps W.R.N.S.

and later: Frofessor Rohrbach, Dr. Schroeter, Dr. Schultz, Herr Krug Herr Brandes, Dr. Benzing, Dr. Deubner, Dr. Olbrecht, Dr. Müller

- 127. On the advice of Professor Robrbach it was decided to divide up up the eight members of the party who had not yet been interviewed into three groups, taking the three gentlemen from Dr. Kunze's party first. It was pointed out to him that the restricted accommodation available did not enable the meeting to ask him to 'sit in' on the interviews, as had been done on previous occasions, and that the presence of section heads at the interviews of members of their sections, which he carnestly requested, would be impossible for the same reason.
- 128. Dr. Schultz, Dr. Schroeter and Herr Krug were called.
- 129. Dr. Schultz is a mathematician and svatistician by profession. He worked before the war in the Statistisches Reichsamt and was transferred to Dr. Kunze's part in 1939 at the outbreak of hostilities. He had worked on the Japanese machine until 1940 when it ceased to be soluble. It had been broken before he came to work on it.
- 130. He then worked on the American B7 (C1) code and solved the recypherment. There were 80 to 100 tables, the first of which were difficult to reconstruct, the later ones getting progressively easier. He built up 80 tables himself. When the tables changed, so that the sequence was no longer every, he continued investigations, but work was discontinued in favour of the American strip '02'.
- 131. He had assisted Dr. Kunze with investigations on the Enigma machine, and the Swiss enigma was successfully solved.
- 132. He stated that his interest in these matters was purely theoretical and mathematical and that he had little idea of the intelligence value of the material he investigated. It usually left his hands before it was actually readable, as Dr. Kunze's party was responsible primarily for breaking recypherments.
- 133. When asked what he considered the greatest methodological achievement of Dr. Munze's party during his term of service, he said that the '02' American strip was in his opinion the greatest success. It was solved by hand, as at that time they had no machines. ('02 wurde entschlüsselt ohne jegliches Hilfsmittel'). He sketched the method of solution as follows:

This is a copy

section 3(4) of the
Public Records Act
1958.

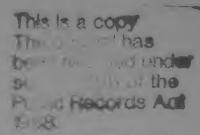

b). In the number of the helicity work on a clish system, the term has a component with bigram substitution. This system has been now still not before but work on it had been discontinued for a shile. This system has been interested in it but had not seriously table the recypherment and had restricted itself to sorting the material. This system was used by the Polish Government in London for a munication with Barne, Washington, Cairo and Jerusalem. He had seen no traffic between London and the underground movement in Poland. Dr. Kunne's party was still working on this system at the time of the capture of Zschepplin. Some tables had been recovered and related, but no sock-breakin; had been done.

136. Dr. Schroeter: Had joined the organisation comparatively later (Spring 1941) and had no intention of 'staying on'. He was a lecturer in mathematical logic at the University of Münster. He had joined Dr. Munse's party and worked independently on Japanese recypherments.

137. He started work on simple transposition recypherments of codes;

been retained under
section 3(4) of the

^{140.} Herr Kruy is a mathematician and a school-master by profession, who had joined the organisation in 1940.

all this time they had no machines and all work was done by hand.

They re 'no traffic refixed INDIV, IMW. or AFAA.

Mollerith machinery: When H. Herith mechinery was finally acquired Herr trug was put in charge of the subsection which operated it. In reply to the suggestion [Comment: see comment on prime. 23] that the acquisition of Hollerith machinery was in some way a maceted with the frilure to continue reading British systems, Herr Brug said that where was no commoRion. His next-dor neighbour in Berlin-Lichterfelde das a Dr. Koch who was manager of the German Hollerith concern. Friendly conversation with Dr. Mach had set Horr Mru; thinking about the application of this kind of machinery to his own work. He had put the project up to his superiors and in due course the equipment had rrived. [Comment: at the First Meeting Professor Rehrbach had suggested (see para. 6) that the acquisition of the machines was due to the personal interest of Ribbentrop]. He said that the OKW possessed no machinery of this kind, but that Göring's Forschungsant did [Comment: there may be some confusion here between the Forschungsabteilung of the OKW and Göring's Forschungsamt].

144. The machines they had were:

20 'alphabetische Locher' (alphabet punchers)

10 'Sortiermaschinen' (sorting machines)

2 'Kartenmischer' (collators)
2 'Kartendoppler' (reproducers)
1 'Rechenlocher' (number punchers)[Corment: he said this was for multiplyin; and differencing]

'Alphabetische Tabelliermaschinen' (alphabetical

2 'Tabelliermaschinen D 11' (calculating tabulators)

1 'Spezialvergleicher' (multipurpose machine lesigned by themselves)

145. They had designed a number of accessories to these muchines, For the sorting machines, they had designed two devices: a 'Kortenzoller' [card counter] and a 'Nummernsucher' [number finder]. The alphabetical tabulators had an attachment which prevented the machine from printing unless there were two or more identical cards. This was useful for

14. The 'D 11' machines were not Hollerith but ordining statistical or iculating mach not made by a German firm. [Comment: the 'L 11' is a cllerite acchine. The captured material contains several prospectuous

Tun me . out. for grant lectors.

- 149. Dr. Schultze, Dr. Schroeter and Herr Krug were dismissed and Herr Brandes, Dr. Benzing and Dr. Deubner were called.
- 150. Herr Brandes is a bookbuilder and joined the organisation in 1920. Since 1938 his special field has been the systems of France, Belgium and Switzerkand. He was satisfied with his work on the whole but thought that more could have been achieved with more staff.
- 151. French: they had read recently a de Gaulle system consisting of a four figure book with a subtractor consisting of five digits reported to the end of the message, changed daily. The code was a hat book which had been revised ('nougement') since the code was a later alteration. Common significations had a number of was a later alteration. Common significations had a number of alternative groups; 'du', 'de 1', 'des', 'full stop' etc. had up to 10 to 20 groups. The traffic passed on this system was of a fairly high order. It was used with "Mashington, London, Stockholm, Moscow, Madrid, Chungking, Buenos Kires and Montevideo.
- 152. He spoke of another French system consisting of a four figure book with letter bigram substitution with limitations. Only 10 letters were involved, so it was easy to convert them into figures. The recypherment was done by tables of 100 bigrams, changing quarterly. The same table would be used an different dates in successive months of the quarter. The bigrams were taken horizontally. Only the Navy used horizontal and vertical substitution together.
- 153. He mentioned an unrecyphered book which was not broken. It ran concurrently with the system described above and had the same External characteristics.
- 154. There were several French systems which they did not read.
- 155. Belgian: They knew four different Belgian systems.
- 156. The first was a four letter book, used in two forms:

 1) a straight alphabetical vocabulary, in which e.g. 'full stop' = UYAK, or 2) in which the groups were transposed within themselves and UYAK was expressed as KUYA. The latter form was the commoner. This book was used with daily changing bigram tables. At first these tables were systematically construct but grew progressively less so until they were finally not systematic at all.
- 157. The second was a three letter unrecyphered book on which they did not work.
- 158. The third was a book known to them as KAMI (the code group for 'full stop'). If the groups were rearranged in the form MIKA the book was partly alphabetical. It was recyphored in the same way as the first (KUYA/UYAK) system.
- 159. The fourth was a four figure code used for traffic with the colonies. The recypherment consisted of transposition of one half of the book group and substitution of the other half. This code could be used as a five figure book, in which case the significations in the second column had to be taken. All the traffic on this book was read.
- 160. Swiss: Everything was read except the rachine, and that was readable for a time.
- 161. There was a 3 letter cole with recypherment by substitution in columns, separate tables being applied to a single letter and the two subsequent letters. The recypherment changed after the 11th,

lith and with groups; a letter, recyphered with the previous tables, in incite. Which tables were to be used for the following groups.

- 162. He mentioned the 'ID 3' code, a trilingual book with German, French and English editions. An indicator showed which edition was being used. This book was unrecyphered.
- 163. Ir. Brandes was unable to state the exact dates when the Swiss Enima was read but said that it was read completely for a considerable time. [Compent: the phrasing of his statement implied that there was also a time when it was partially readable].
- 164. Ir. Benzing joined the organisation in 1937. He is an orientalist by training, Turkish being his speciality. He worked as a bookbuilder on the systems of the Near Eastern worked as a bookbuilder on the systems of the Near Eastern countries. His section was fully occupied with Turkish and countries, so that although in theory they were also responsible for the Arabic speaking countries, no work was in fact done on them.
- 165. All the <u>Turkish</u> diplomatic traffic was read. A few short messages sometimes proved difficult. The Turks used a 40 figure subtractor.
- 166. All the Persian systems were read. They used a three letter book with substitution tables, which often changed. The Persians however always indicated in clear which table was in use.
- 167. Dr.Deubner: a classical archeologist by profession [Comment: of considerable repute]. Had done excavations in Greece and had a post at the Pergamon Museum in Berlin. Worked on Italian and Greek systems.
- 168. I clian: asked at ut Italian systems after the collapse he mentioned a double transposition used by the Badoglio government shield was never solved, and a meadable unrecyphered letter 'administrative code' used mainly for communications with Berne, and a system known to them as the 'Salzburg-Verfahren' with a 10,000 group ('Element') subtractor. This system was very difficult and was worked on by Dr. Paschke personally. It was seldom broken.
- 169. Greek: there were three systems, all of which were read:

 1) a clear 5 letter book, the fifth letter of which was dummy; this carried most of the traffic.

 2) a clear 4 letter book, used mainly for traffic with Berne.

 3) a four figure book used with bigrom substitution of 30 tables of 100 bigrams each. It was used between London and Moscow, Washington, Caire and Ankara. Traffic from London amounted to about 1 a day. The bigrow tables changed according to the date.
- 170. They had not received any captured Greek code or cypher documents.
- 171. They have read no partisen traffic.
- 172. He stated that there was close liaison with the O.K.W. in his field to eliminate applie tion of mork.
- 173. It took up to 8 to 3 to receive traffic from intercept; and from 1 to 4 more days fore translations ere issued.

174. Herr Brundes, Dr. Benzing and Dr. Deubner were dismissed and Dr. Olbricht and Herr Miller were called.

- 175. Dr. Olbricht is a bookbronker. He took a dectorate in Chinese in 1938 and joined the organisation in 1939, where he worked mainly in Japanese and Lanchurian systems.
- 176. JB 57. Another Japanese two letter book with a recypherment consisting of stencil transposition with mills, which was read for about two years. There was also a variant with substitution recypherment using a table of about 30 alphabets.
- 177. He confirmed Dr. Schroeter's statements on Japanese systems.
- 178. Manchurian systems: he mentioned transposition recypherments of a basic Japanese three letter book. There were 366 very small cages, one for each day. If the message was too long to fit one of these cages, it was continued on the cage for the next day and so on. This system was no longer current. Dr. Schroeter had been working on a current Manchurian system, the method of recypherment of which was thought to be the same as before.
- 179. They had had a captured Manchurian code book.
- 180. They did not handle Chinose military attaché traffic. A Chinese system called UTI had been solved in 1941-42.
- 181. <u>Dr. Miller</u> is a private teacher of languages who joined the organisation in 1940. He worked on Scandinavian and American systems.
- 182. His work on Scandinavian lasted for three months in 1940 when all Scandinavian work was transferred to the OKV. During that time he had worked on a Swedish unrecyphered five figure hat book. Practically no work was some on Danish or Norwegian. He had some unofficial liaison with people at Güring's Forschungsemt who were working on Scandinavian.
- 183. After he gave up Scandinavian he worked in U.S. systems and corroborated in general the statements of Herr Zastrow on these (see para. 80 ff.) He added that the 'Brown Code' was used for traffic with Berne, Ankara, Kuibyshev, Beyrouth and South American posts such as Rio de Janeiro. He knew of no American system B9 cr Blo.
- 184. The meeting was adjourned.

show. Pervous type. Sporks some English.

187. Oberregierungsrat Schauffler:

moreover has difficulty in expressing himself. Appears to be asleep most of the time; this is deceptive. Mawarldly academic type. Greatly respected by his colleagues. Understands English.

188. Dr. Kunze:

Professional competence apart, rether nondescript. Anxious to please, but often gave evasive answers.

189. The three section heads we a obviously prepared for therough cross-examination, and were somewhat nonplussed by the informal way in which the interrogation developed. Such information as was withheld by the seniors, or rather was not volunteered by them, was, however, easily obtained from subordinates.

190. Dr. Karstien:

Cold, dandified and conceited; a 'man of the world'. Had a low opinion of the interrogators, which was reciprocated. Likely to be more affected by intellectual than by moral scruples.

Understands English.

191. Dr. Schroeter:

Pleasant academic type, good character.

192. Dr. Schulz:

Unworldly academic type; rather frightened of us.
Some English.

193. Herr Krug:

An enthusiast for his job, particularly for his machines, and carer to talk about them.

Some English.

194. Frl. Friedrichs:

Able woman of strong character, who would come to the too in any more neighbors. Frobably not too scriptlous. A good ally in any dubious undertaking.

English Thacht and illomatic.

195. Cover Names used during the interrogation:

Tiltm n = Dillon V noent = Vil n

ok =

Scener = Seynour
Fohl = Pachail
Rulley Smith = Inderson
Firster = hacrefor

PPINDICES.

L: Organization of 'Pers. IS' as at end of 1943.

B: Organization of 'Pers. IS' as in April 1945.

These are copies of Locuments compiled at the request of Lt. Col. Evans by ORR. Schauffler and Dr. Paschke.

ORGANIZATION OF TERS.ZS! AS AF AND OF 1943

Juswirtiges Amt

Durgscheidungen, den 27. april 1945

.. bteilung 'Pers. '6'

d.i.: Entzifferungsdienst für fremde diplomatische Telegramme mit der Dezeichnung "Gonderdienst", verwaltungsmässig der Personalabteilung des Auswirtigen Antes angegliedert.

Leiter: Gesandter I.Kl. Selchow

Ab Ende 1943 durch Verlagerung von swei Abteilungen in lusweichquartiere Aufteilung des Gesamtsonderdienstes in Crei Abteilungen, die durch täglichen Kurierdienst miteinander verbunden waren. Dauer dieses Zustandes bis Januar 1945.+)

Hiernach war die Verteilung der Geschäfte wie folgt:

I. Stammabteilung Berlin - Dahlem

Leiter: Oberregierungsräte Sehauffler und Paschke

a) Schauffler:

Japan

Systematik und Grundlagenforschung

Verwertung der Erfahrungen an fremden Chiffrierverfahren für die eigenen Verfahren des Reichs

Dearbeitung und Edition von diplomatischen Telegrammen folgender Länder:
